

Microservice

1. User Service

- Manages user-related operations such as registration, login, and password change.

2. Post Service

- Manages post-related operations such as creating, updating, deleting, liking, and commenting on posts.

3. Comment Service

- Manages comment-related operations such as creating, updating, deleting, liking, and replying to comments.

4. Like Service

- Manages like-related operations such as liking and unliking posts, discussions, and comments.

Each service should have its own set of controllers, models, and routes. The services should communicate with each other through APIs
